### DETAILED ACTION

- ✓ 1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Rotor structure of a stepping motor having a maggot holder connected to the shaft with a bush.

### Drawings

- ✓ 2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the magnetic ring disclosed in claim 2 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

### Claim Rejections - 35 USC § 112

- ✓ 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 6, 8 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicant needs to explain the term "punching" in claim 6.

In claim 7, what is meant by the term "bush is assembled to shaft by 'interfering'"?

What is the bush interfering with?

In claim 9, the term "riveting" needs explanation.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Hishida et al.

Hishida et al discloses a magnet 338 having a first annular wall; a magnet holder 334 having a base and a second annular wall connected with first annular wall; a shaft 320 having one end mounted through base of magnet holder; and a stopper 318, a plurality of coils and the magnet holder is connected to one end of shaft 320 with a bush 354 (see figure 11).
